Law of Torts, MV Act & Consumer Protection Act

Credit - 04

Introduction:

The course aims to examine the effectiveness of the tort system in compensating individuals suffering personal injury, injury to reputation, psychological damage, economic loss or incursions on private property as a result of accidents, disease or intentional acts. Focusing on the tort of negligence, the course explores the social, economic and political contexts in which the rules and principles of tort are applied. The Law of Torts is primarily concerned with the redressal of wrongful civil actions by awarding compensation. In a society where men live together, conflicts of interest are bound to occur, and they may, from time to time, cause damage to one or the other. In addition, with rapid industrialization, tortious liability has come to be used against manufacturers and industrial units. The Law of Torts originated from Common Law, and by and large, this branch of law continues to be uncodified. Tortious liability has been codified only to a very limited extent such as workmen's compensation, motor vehicle accidents, environmental degradation, consumer protection and the like. As the Law of Torts is basically a judge-made law, students are required to study it in the light of judicial pronouncements. They are required to equip themselves with the latest developments extending to the entire course.

Course Objectives:

1. To familiarize the students with the origin, development and general principles of the law of torts.
2. To introduce learners to the defences and remedies available to tort actions.
3. To enable learners to apply tort law principles to different factual scenarios.
4. To prepare the students to apply their knowledge and critical legal thinking to explore and develop their own perspectives and interpretations and support them to logical arguments.
